

OTB BOOTS - SIZING/FIT INFORMATION

Performance Boat Shoe Fitting Instructions:

OTB performance boat shoes fit true to size. Our shoes are made on a fuller last, meaning they are slightly wide, however we do include special spacers in each box to help you get the perfect fit should you be on the narrow side. You should order the same size as your normal dress shoes. We do make our performance boat shoes in 1/2 sizes. Should you be ordering the TIDE model, please refer to the fitting instructions for our boots below.

Boot Fitting Instructions:

OTB Footwear fits on the "fuller" side, similar to, but not quite as wide, however we include a spacer or "filler" in each box. For those of you who are a 1/2 size, below is an example to help you select the proper size.

EXAMPLE:

If you are on the smaller side of a 9 1/2 (you sometimes buy a 9 or 9 1/2) we recommend you purchase a size 9.

If you are on the larger side of a 9 1/2 (you sometimes buy a 9 1/2 or a 10) we recommend you purchase a size 10.

We put a spacer in each box to take up the room inside of the boot if the fit is too large. The flat perforated spacer should be placed below the footbed. This will take up space and help you get the correct fit.

Wearing Waders??

One point to note, if you are wearing a pair of waders with a 3mm neoprene sock foot, or a thick sock and waterproof waders (or a dry suit), we recommend you purchase the next size up.
